Session - 10 - Editable Templates

We achieve responsive editing in AEM via a component called **ResponsiveGrid**.

Static Template

Developer(Templates) -> Content authors (Pages)

Editable template

Developer(Templates Type) -> Power authors (Editable templates) -> Content authors (Pages)

Editalbe templates

1. Template console
2. Template Editor
3. Structure
4. Initial Content
5. Policies
6. Layout

We-train

Homework

1. Create a new project under template console folder for your own project name and then create template type there via copying as we did for we-trian. Then create templates using this tempalte type into your project. Now use this new template to create your site as we are doing for we-train site.
