Day-13 Notes

Wednesday, 12 November 2025 8:24 AM

Vanilla AEM 6.5.0 which is around 5 years old

We have lot of service packs provided by Adobe. Latest service pack is somewhere around 24 or 25

6.5.24

Archetype 56

This location you go and delete whatever is below "repoinit" node and then restart your server.
/crx-quickstart/launchpad/config/org/apache/sling/jcr/repoinit

---

Session - 16

Topic - **Sling Models**

Sling Models are helper class in AEM. Which helps to write business logic and send data to Sightly or HTL.

Shortcut maven build command to skip frontent and junit build
mvn clean install -PautoInstallPackage -Dmaven.test.skip=true -Dskip.npm.build=true

---

Sling Model Exporter

```
@Exporter(name = "jackson", extensions = "json")
```

Homework

1. **Adobe ID creation** -: Create a account on Experienceleague.adobe.com, with your capgemini email ID.
2. Bring training project into mysite project inside IntelliJ/Filesystem. Remember to bring all sling models which I shared in session-16 exercise folder.
3. Create an Employee component this component will take employee details as input and display them in the html. But to do this you have to consider following points
   a. It has to be created inside IntelliJ, no use of CRXDE.
   b. It will have to use sling model, no use of properties object.
