Day-18 Notes

Wednesday, 19 November 2025 8:37 AM

Session - 20 (Workflows)

Workflows

1. Workflow Console - Done
2. Workflow Model - Done
3. Participant steps -
4. Process steps -
5. Workflow Payload -
6. Workflow instance -
7. Workflow Launchers

NOTE -: DAM UPDATE ASSET workflow only exist in AMS or AEM 6.5 It doesn't exist on cloud.

Homework

1. Create a new custom workflow process and use it in a new workflow inside process step. This workflow process will display the payload with some string appended to it, for this you will use your stringManipulation service method. Diplay this inside the logger.
2. Create a new component inside my-site project which will use a sling model. In this comonent dialog you select path of a page. Then you read this path inside sling model and then this slingmodel will return list of child pages for this input page. Which you have to send this list of child pages to the Sightly. In sightly (html) you will display this list using data-sly-list block statement.
